Matrix Rotary Seal

Easy-to-Install Patented Split Rotary Seal for Worn Shaft Applications

The Chesterton® patented Matrix Rotary Seal is a split bearing seal developed to work on worn equipment and large run-out shafts. This unique seal protects pumps, gearboxes, and other rotating equipment.

The innovative split design eliminates the need for equipment disassembly and minimizes equipment downtime to ensure optimal continuous operation of critical equipment.

This product is a robust, maintenance-friendly, easy-to-install solution to address equipment with:

- Worn Shafts/Sleeves
- High Vibration
- Large Run-Out
- Blind Installations

Targeted Applications
Pumps, gearboxes, conveyors, motors, and fans

Common Seal Profiles

Matrix
Design and Function

The innovative unitized design combines Chesterton’s leading polyurethane and impregnated synthetic fiber packing technology to maximize seal performance and reliability.

A. Compression Packing – Impregnated synthetic fiber creates a seal against rotating shaft
B. Nylon Pins – Prevents rotation of compression packing
C. Energizer – Closed cell foam energizes compression packing against the shaft to help create a seal
D. Polymer Housing – Durable, flexible material unitizes the seal assembly and energizes the sealing element

Split Seal Design for Easy and Quick Installation
